

Oversee Everything. Overlook Nothing.

IoT | IoA | Telematics-driven solutions

Driving efficiency to new heights.

In the wireless world we live in today, Bigmate understands that data-driven insights can be a lifeline to a business. Your cars, trucks and other high and low value assets can be a constant source of intelligence on your business. Bigmate can unlock your assets' voice and allow them to speak to you, revealing information that can help you save on operational expenses, whilst giving you information that can assist in greater business understanding. Bigmate provide the analyses and present that data in a meaningful and insightful way.

It's about what should be done, not what can be done.

Not only do we offer asset position location services, our tailor-made, cutting-edge solutions ensure you have multifaceted access to data surrounding your asset to get maximum ROI. From fuel consumption and driver behaviour to efficient routing and fleet utilisation, we are able to provide you with a truly customised solution for optimum asset management.

Helping your assets reach their fullest potential.

Bigmate was established with a vision to be one of the leading innovators in the global field of GPS monitoring and asset management technology. Today, with over 15 years' experience in the field, we are one of Australia's brightest telematics and Internet of Assets (IoA) solution providers, offering cutting-edge GPS monitoring and productivity solutions to a broad range of industries and markets.

Improving your cost management, one report at a time.

Over our years in the telematics industry, we've worked within the IoT universe and realised that data from assets needs to be utilised better. That was how we took it a step further and developed our Internet of Assets (IoA) framework – which brings your assets closer and provides a more tangible solution on how to implement change through the information they provide. Not only do we keep track of your assets, we convert their data into a sophisticated presentation layer that reports key information - which assists in driving down your costs when it's clear where changes need to be made.

Seamless integration to future-proof your investments.

At Bigmate, we believe it is our responsibility to provide you with technology that is innovative, compliant and above all, future-proof. As one of Australia's TCA Type-approved telematics unit providers, we have been able to design solutions to integrate current and future telematics and C-ITS applications – improving the safety and manageability of the transport network, and reducing congestion and costs.

Partnering across borders comes naturally.

Though Bigmate is a leading provider of telematics-based business intelligence, covering people, vehicles, and assets in the APAC region, we understand that telematics needs to transcend borders. To be able to offer our unique solutions around the world, we have partnered with the global provider of on-demand cloud computing platforms - **Amazon Web Services (AWS)**, as well as with the global leader in the M2M and IoT space, PositionLogic - a **KORE Wireless Group** company. With these experts working seamlessly around the globe with our own dedicated team of hardware and software experts, you'll see why we can deliver tailored solutions that meets your specific needs.

Constant innovation sets us apart.

When you join forces with us, you can rest assured that you're getting the best. Our team of experts understands the changing needs of the market, and is constantly adapting to stay ahead of the game. For instance, Bigmate played a pivotal role in the **Australian Driverless Vehicle Initiative (ADVI)**, the first autonomous car trial in the Southern Hemisphere – where we tracked the vehicle for historical data and, more significantly, displayed live data to the delegation. We have also worked with **Local Governments** across Australia, providing them with unique telematics-integrated solutions.

We're all about boosting efficiencies for companies of all sizes.

We can offer an affordable and immediate solution that gets you into the IoT market without the need to build your own or run a network, you can use this to deliver our IoA solutions and underpin your IoT initiatives.

We can deepen customer relationships through Asset and telematics enabled offerings and enhance your brand by offering leading-edge features on equipment. We let you serve customers through proactive maintenance offerings.

We can offer you an easy-to-use presentation layer that lets you tap into the profit-driving capabilities of your assets.

Maximise ROI on your assets with customised solutions from Bigmate.
